

What Direction is your house facing ?

Step 1 : Go outside

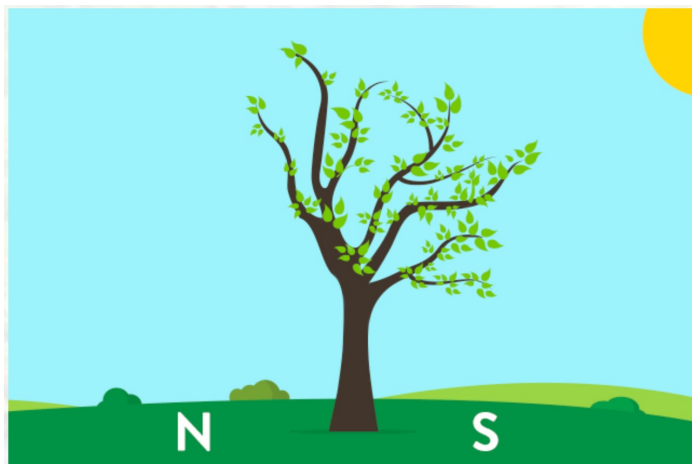

Step 2 : Don't look directly at the sun, but take note of its position in the sky and the time

- The sun rises in the east, at midday is in the south, and it sets in the west

Step 3 : Look at the trees.

- Trees that grow in full sun tend to angle themselves towards the sun when it is in the south. The the tree branches can tell you which direction is south

Step 4 : Is it nighttime ? Look at the stars

- If you can find the big dipper, you can find the north star
- Once you find the north star, take the two stars at the end of the pot and then extend out about 5 times that distance and you will find the north star, which is faint but that will tell you where north is

So now based on your knowledge of North South East and West, which direction is your house facing ? Tell us on Facebook if you were able to find your answer
